### Development trends of the legal science in the XXI century

The article deals with the most significant results of the scientific conference, during which the participants analyzed state of science, its modern problems and also determined the main direction of the future scientific activity of scientists and lawyers as to correction of gaps that have formed as result of the ideologized science.

Leading representatives of the scientific community should make all efforts to the cause of nation-building, in particular, to reform the scientific and technical field. Scientific elite, more than ever, need to give up our own interests and ambitions for Ukrainian future, its economic development that depends on the scientific achievements.

It should be noted that at the present stage of jurisprudence is not always quick to respond to challenge of the modern community.

Important result of the national conference was describing the perspectives of legal science in the twentieth century. Conference participants reached a consensus that the further development of the science at the present stage is directly related to the need to solve practical problems that society and the state faced, intensification of studies aimed at solving specific problems in various areas of law that need urgent solution.

**Key words:** legal science, scientific and practical conference, challenges of time, prospects of development.
